

Stock Jamb Material: Veneered Moisture Resistant Particle Board

Moisture Resistant Particle Board (PB) is perfect for use in places with high humidity levels. In comparison to standard PB, Moisture Resistant PB contains a moisture-repellent resin which gives it a better moisture resistant rating. However, moisture resistant PB shouldn't be mistaken to be 100 percent water resistant as it's still prone to swelling and warping if in direct contact with such elements.

Key Features

- Contains a moisture-resistant repellent for use in places with high humidity levels
- Easy to fix with glues and screws
- Can be cut to suit various shapes and forms
- Easy to sand
- Takes well to most adhesives, paints and veneers
- Light surface makes marking easy to see
